

# VO VAN HUAN

## BACK-END DEVELOPER

📍 Ho Chi Minh City

✉ huanvovan122@gmail.com

☎ 0963012812

## SUMMARY

I am a Backend Developer with 6 months of experience in building systems and APIs using Node.js, Java, and C#. I have a solid foundation in object-oriented programming, working with relational databases, and developing RESTful APIs for web applications. I am a quick learner with strong logical thinking and an ability to collaborate effectively in team environments. In the near future, I aim to further strengthen my expertise in system architecture design, deepen my knowledge of coding. My goal is to become a technically proficient backend developer who can contribute to large-scale projects with high performance and reliability.

## EDUCATION

2020 - 2025

SAIGON UNIVERSITY

- Software Engineer
- GPA: 3.1 / 4.0

## CODING SKILLS

- **BackEnd:** Nodejs, Nestjs, Java ( Spring Boot ), Golang (Basic).
- **FrontEnd:** Reactjs
- **Mobile:** React Native, Java ( XML)
- **Desktop:** C# ( Winform)
- **Database:** MySQL, MSSQL, Mongo, Redis, PostgreSQL
- **Cloud:** AWS (EC2, S3), Cloudinary, Firebase
- **Monitor:** Prometheus, Grafana
- **Testing:** Postman, Swagger, Jmeter
- **Other:** Docker, Github, Gitlab, Jira, RESTful API, Websocket

## SOFT SKILLS

- Strong problem-solving mindset
- Fast learner and adaptable
- Effective communication and teamwork
- Good time management and responsibility
- Ability to work independently and under pressure

## WORK EXPERIENCE

**Phu Hung Securities**

09/2024 - 12/2024

Backend Nodejs Developer Intern

- Participated in software testing, ensured API quality, and tested applications to ensure functional completion.
- Researched and utilized JMeter for API testing.
- Explored Prometheus and Grafana for system monitoring and setting up alerts for incidents.
- Studied the software development process using Jira.
- Researched the structure of new Microservices-based projects.
- Analyzed and understood the source code of the company's projects.
- Contributed to fixing bugs, developing features, and building internal applications and software for the company.
- Provided daily work reports and updates.

**Alta Software**

07/2023 - 09/2023

React Native Intern

- Learn about React and React Native such as: development tools, components, application lifecycle,...
- Learn about Clean Architecture Template
- Build App based on available Figma files
- Weekly work report

## PERSONAL PROJECT

**Medicine Shop (Android Mobile Application)**

07/2024

- **Project Link** (Front-end) : <https://github.com/VoHuan/MedimateClient.git>.
- **Project Link** (Back-end) : <https://github.com/VoHuan/MedimateServer.git>.
- **Demo:** <https://www.youtube.com/watch?v=ulZXAta88dc>
- **Description:** This is a mobile e-commerce application designed for selling medical products. The app includes basic features such as View, search, filter products, read news, manage shopping cart, make purchases, online payment with **Momo** and **ZaloPay**, redeem points, promotions, view and edit profile, upload images with **Cloudinary**, view invoices, including
- Restful API, **JWT** authentication, SMS sending, push **Notifications**, **Google** login, and **Firebase** integration.
- **Languages:**
  - **FE:** Java (android, XML)
  - **BE:** NodeJS, deployment with AWS, Docker
- **Tools:** Postman, GitHub, MySQL, Figma, Firebase
